Open-Ended Questions

- Convert the Following Sentences into Passive Voice**
 - The software engineers develop new algorithms every day.
 - The programmer tested the code yesterday to ensure it works.
 - They are installing the new operating system on all computers.
- Convert the Following Sentences into Active Voice**
 - The algorithm was developed by the software engineers last month.
 - The code is being tested by the programmer to identify any errors.
 - The documentation is written by the project manager.
 - The files were being backed up by the the developers during the system update.
- Passage:**

Firewalls are security tools used to protect computers from unauthorized access. They act like barriers, blocking harmful data from entering the computer. Firewalls are often used in companies to protect sensitive information. Some firewalls are software, while others are hardware devices. A firewall can help prevent hackers from stealing data.

Answer the following questions with only one sentence:

 - What is the main purpose of a firewall?
 - Who might use firewalls to protect information?
 - What types of firewalls exist?
